

Curriculum Vitae

INFORMAZIONI PERSONALI

Nome FABRIZIO
Cognome PEPE
Recapiti +3909123864667
Telefono 333-9289437
E-mail fabrizio.pepe@unipa.it

FORMAZIONE TITOLI

2000 – 2004 Post-doctoral Research Fellow, Geology, University of Palermo, Italy

1995 - 1999 – Ph.D., Geology, University of Naples “Federico II”, Naples, Italy

1989 - 1993 – Undergraduate and M.S. studies, Geology, University of Palermo, Italy

Title of Ph.D. Dissertation: “Kinematics of rifting processes in the northern Sicily passive continental margin using a new acquisition tool to perform high-resolution seismic profile”, Advisers: Raimondo Catalano (primary) and Giovanni Bertotti.

Title of M.S. Dissertation: "La spettrografia a microtremori. Uno strumento utile nelle indagini geologiche e/o sismologiche".
Advisers: Maria Stella Giammarinaro (primary) and Raimondo Catalano.

Awards **2000** - “Young Scientists’ Publication Award (Solid Earth Geophysics)” of the European Geophysical Society for his publication “Rifted margin formation in the South Tyrrhenian Sea: a high-resolution seismic profile across the North Sicily passive continental margin”.

ATTIVITA' DIDATTICA

I have given a number of courses in different disciplines and at different levels. Some of the most important are: Marine Geology, Oceanography, Basin Analysis and Field Geology.

RICERCHE FINANZIATE

I am currently involved in the following research projects:

Identification of relict sand deposits in the Sicily and Calabria offshore areas. Principal Investigator: Prof. Fabrizio Pepe;

Vulnerability of the Mekong Delta to flooding and pollution under the impact of climate change, tectonics and anthropo-genic activities, submitted for funding at the Ministry of Foreign Affairs and International Cooperation. Principal Investigator: Prof. Fabrizio Pepe;

PRIN 2017: “Overtime tectonic, dynamic and rheologic control on destructive multiple seismic events - Special Italian Faults & Earthquakes: from real 4D cases to models”. Scientific Leader of Research Unit Prof. Carmelo Monaco;

Earthquake Potential of Active Faults using offshore Geological and Morphological Indicators (EPAF), admitted to funding by the Ministry of Foreign Affairs and International Cooperation. Principal Investigator: Prof. Fabrizio Pepe

ASSOCIAZIONI SCIENTIFICHE

Member of the Italian Geological Society, 2006-Present

Member of European Geophysical Union, 2000-present

Member of American Geophysical Union, 2000-present

PUBBLICAZIONE

The main results of his work are being published in leading international Journals (see below):

ATTIVITA' SCIENTIFICHE

Linking scales and disciplines is my favoured approach. My first research objective using an interdisciplinary and multi-scale approach was the reconstruction of the architecture and Late Neogene to Recent tectono-stratigraphic evolution of North Sicilian and Western Calabrian continental margins. The reconstruction of the pattern and rate of post-20 ka vertical tectonic motion based on offshore geomorphological indicators was at the centre of the work I carried out around the Capo Vaticano Promontory (W Calabria, Italy). I then moved to a) the offshore area between the Southern Apennines and Calabrian Arc, analyzing active deformation in a supposedly stable crustal sector; b) offshore south-western Sicily, analyzing active deformation in an area close to the macroseismic zone of destructive earthquake sequences; c) the Gulf of Patti and its onshore sector, which represents one of the most seismically active regions of the Italian Peninsula.

Current research projects focus on: 1) the development of an innovative method to identify the geometry of active offshore faults and calculate their average long-term slip rates; 2) the reconstruction of the fore-arc deformation of the Tyrrhenian Ionian Subduction System; 3) the identification of the relationships between tectonics and volcanism in the offshore western Calabria and Sicily Channel; 4) analysis of active deformation within the Neapolitan Yellow Tuff caldera, offshore the Campi Flegrei (Naples), using ultra-high-resolution 2D and 3D seismic data; 5) active tectonics of the coastal area along the southern Tyrrhenian Sea; 6) vulnerability of the Mekong Delta to flooding and pollution under the impact of climate change, tectonics and anthropogenic activities.

AMBITI DI RICERCA

Area of Interest: Marine geology, Tectonics, Basin analysis

Expertise

I am a **marine geologist** with wide experience in **quantitative tectonics** and **sedimentary basins analysis**. Since 1993 I have participated in numerous oceanographic cruises aimed at acquiring geological and geophysical data, in particular **high-resolution mono and multi-channel seismic reflection data**. It was during my first years as a researcher that I designed

and implemented a multi-channel seismic data acquisition system, which was widely used to acquire seismic data in the southern Tyrrhenian Sea. The ability to process and interpret high-resolution mono- and multi-channel seismic data was a further skill acquired during this period. I have also learned to use numerical models during periods spent at the Vrije Universiteit of Amsterdam. I like combining different geophysical and geological data acquired at the scale of basins with that of larger regions in order to link marine geology to a tectonic approach.

ALTRÉ ATTIVITA

STUDY AND RESEARCH STAYS

March 2011: Delft University of Technology, Delft; The Netherlands

March 2010: Delft University of Technology, Delft; The Netherlands

September 2008: Department of Earth Sciences, Vrije Universiteit, Amsterdam; The Netherlands
